Data to Text

BI dashboard - the gap

Dashboards are built to support decision making.

Yet the dashboard provides data only.

The causes and conclusions must be reached outside of the screen full of charts.

Metabase BI dashboard

How these transactions are distributed

BI tools adoption rate in companies - 51%

Functions Driving BI

BI Objectives

- *Forbes: The State Of Business Intelligence, 2018*
- *Grid® Report for Business Intelligence Platforms | Spring 2018*

A narrative to fill the dashboard gap

Once upon a time

A close-up photograph of a black pen with a gold-colored tip writing the words 'Once upon a time' in a cursive script on a light-colored, textured piece of paper. The pen is positioned at the end of the word 'time' on the right side of the frame. The text is written diagonally across the page.

A dashboard with the narrative

Sales steadily increased from 2017 till 2019. During 2020 growth in sales has stopped.

How these transactions are distributed

Number of transactions peaks in August each year.

The income from transaction stays around 90\$ throughout the year.

Discounts are low though they fluctuate from month to month.

How does it work?

“Sales steadily increased from 2017 to 2019.
During 2020 growth in sales has stopped...”

The missing part

NLG engine can not know what to tell. There has to be a reasoning (data science) component attached to tell it what is important. What needs to be communicated.

David Clode

Accelerated Text philosophy

Data descriptions require precision. We can only state what follows from the data and is available in a broader knowledge base of the domain.

You can not trust a transformer to explain your business data to you.

Other applications

- product descriptions
- data analysis reports
- personalised communication with customers
- device maintenance reports
- and more

NLG benefits for BI

- Consistent logic and structure facilitate quicker comprehension, thus leading to quicker action
- Analysts do not have to engage in laborious and repetitive data analysis tasks
- The reports are prepared faster and their range is increased
- Automated text generation allows to scale available analytic resources

Thank you
